

Phase 0 prototype: scaled net income, 300-ticker yfinance sample

Bin width 0.005 of beginning-of-year total assets; zero falls on a bin boundary, not inside one. N = 204 firm-years; 88 distinct firms; fiscal years 2023-2026. Source: yfinance (300-ticker prototype sample). Window restricted to $|\text{scaled earnings}| \leq 0.10$. Dashed rules mark each focal bin's count predicted from its two neighbours, $(\text{count}_{i-1} + \text{count}_{i+1}) / 2$.
